

Record of Achievement And Feedback

Rhys Postans

has been assessed by the Academy4Digital EPAO and has demonstrated
the knowledge, skills and behaviours against:

DevOps Engineer (Level 4)

As shown overleaf
Issued by:

**Academy for Project Management Ltd (Academy4Digital)
End-Point Assessment Organisation (EPAO)**

using the

DevOps Engineer Level 4

Standard and Assessment Plan

Recommendation:

Distinction

final grade to be awarded by the Awarding Body

10 March 2026
Date of Assessment

For Academy4Digital and Assessors

Dev Ops Engineer Level 4					
Assessment	KSB's		Learning Area	Pass Criteria	Distinction Criteria Met
Assessment Method 1 - Project, Presentation and Questioning	K2 K5 K7 K14 S9 S11 S14 S17 S18 S20 S22	Code Quality P1	Writes code, both general purpose and infrastructure-as-code (including cloud infrastructure) that is correctly versioned and easy to merge, while adhering to the principles of distributed Source Control.		
		Code Quality P2	Demonstrates an iterative approach to evolving code consistent with cloud security best practice, evidenced by a lack of vulnerabilities and that all dependent components are present at run time.		
		Code Quality P3	Writes code around unit tests, including the appropriate use of test doubles and mocking strategies.		
		Code Quality P4	Explains troubleshooting methods used to identify and resolve issues and gives an example of identifying and remediating an issue that compromised code quality.		
	K4 K10 K21 S3	User needs P1	Writes user stories that are understandable to a wide range of stakeholders, stand up to scrutiny and lend themselves to a solution based on common architectural patterns - i.e. reducing the number of moving/redundant parts; passes all acceptance tests.		
		User needs P2	The piece of code meets the 'must have' identified functional/non-functional user needs encapsulated in the acceptance criteria for the task.		
		User needs P3	Creates a quality product in terms of Mean Time To Recovery (MTTR) - i.e. reduced time to fix bugs.		
	K1 K15 S15	CI-CD Pipeline P1	Builds a fully functioning, automated CI-CD pipeline with all tests passing.		
		CI-CD Pipeline P2	Evidences a code commit progressing seamlessly from a build artefact to the end user.		
		CI-CD Pipeline P3	Explains the pipeline capability, including the benefits of frequent merging of code, in terms of Continuous Integration/Delivery/Deployment.		
	K8 S5	Refreshing & Patching P1	Deploys immutable infrastructure that enables the regular recycling of servers and refreshing of associated software based on manual processes.		
	K11 S6 S19 B3	Operability P1	Installs and manages monitoring and alerting tools that provide coverage of the infrastructure and applications, including RAM and CPU utilisation, application error rates and availability (health check).		
		Operability P2	Configures appropriate alerting thresholds and visualisations. Interprets these in terms of failure scenarios and remedial/follow up actions taken to deliver continuous improvement.		
	K12 S7	Data Persistence P1	Employs and operates an appropriate data persistence technology, such as database, configuration/infrastructure state management to meet non-functional and functional needs.		
		Data Persistence P2	Explains troubleshooting steps taken to locate issues across the end-to-end service.		
	K13 K17 S12	Automation P1	Introduces process efficiencies by automating the setting up/deploying of the project (infrastructure and applications) from scratch, both locally, including all tests, and to a hosted environment.		
	K16 S10	Data Security P1	Builds in security so that all data in transit is encrypted and secure.		
		Data Security P2	Explains the types of threats and the rationale behind the decision to either encrypt data at rest or not.		
	Distinction 1	User needs D1	Produces a piece of code that meets the 'should have' identified functional/non-functional user needs encapsulated in the acceptance criteria for the task.		
	Distinction 2	Refreshing & Patching D1	Fully automates the refreshing and patching process.		
	Distinction 3	Operability D1	Introduces custom metrics that provide additional improvement areas		
	Distinction 4	Operability D2	Explains how these improvement areas may be interpreted, implemented and delivered.		
	Distinction 5	Automation D1	Identifies an additional opportunity and introduces automation that reduces overall effort.		
Project & Practical Assessment.				Distinction	

Assessment Method 2 - Professional Discussion	K9 K23 KS2	Organisational Culture P1	Explains how an organisation's culture can both provide creative freedom and introduce constraints.	
		Organisational Culture P2	Explains the connection between culture and the organisation's potential for continuous improvement with both internal and external parties.	
	K3	Data Ethics P1	Identifies relevant data protection legislation and assesses its impact on the ethical use of customer data, as well as its relevance to emerging technologies, such as Artificial Intelligence and Machine Learning.	
	K6 S21	Problem Solving P1	Identifies different problem solving techniques and evaluates how they use modelling approaches that are best suited to each technique in order to gain consensus as a team.	
	K18 K19 K22 S8 B4	The Profession in context P1	Identifies the typical multi-disciplinary team roles and explains how they fit within the organisation and the wider digital landscape.	
		The Profession in context P2	Explains how they completed a task, deploying a flexible, collaborative and pragmatic approach with peers and other stakeholders.	
		The Profession in context P3	Describes examples of different communication methods used when dealing with internal and external stakeholders.	
		The Profession in context P4	Explains how they have acted in an inclusive and professional manner.	
	K24	Tooling & Technology P1	Explains the difference between the various types of implementation - on premise v SaaS, open source v enterprise, bespoke v off-the-shelf.	
		Tooling & Technology P2	Explains an example of having utilised the right type of tool for a particular task, describing the pros and cons of the alternatives.	
	S1 S4 B1	Continuous Learning & Development P1	Explains the CPD undertaken by themselves in order to keep up with cutting edge technologies and maintain appropriate certifications.	
		Continuous Learning & Development P2	Explains how they invest in others continuous learning and activities and the impact this has on their own development.	
	K20 S13	Peer Review P1	Explains the benefits, in terms of security and overall quality, of subjecting written code to the scrutiny of others. Explains how they collaborate on code through pair/mob commits.	
	S1 S4 B1	Communicating & Knowledge Sharing P1	Explains when they have: a) lead a demonstration or discussion in an engaging manner, communicating at the right level to suit technical and non-technical audiences. b) worked collaboratively to share knowledge through, for example, blog posts and pairing on tasks.	
	Distinction 1	Organisational Culture D1	Explains the mindsets that underpin organisational culture - e.g. outcome versus activity driven, collaboration versus silos, accountability, trust and empowerment and their impact on the organisation.	
	Distinction 2	Organisational Culture D2	Assesses the difference between risk avoidance and risk acceptance and how these link to culture.	
	Distinction 3	Problem Solving D1	Describes how they facilitated an incident postmortem/lessons learned session.	
	Distinction 4	Problem Solving D1	Explains the root cause analysis process. Gains consensus on an improvement plan, including accountabilities and the implementation timeline.	
	Distinction 5	Tooling & Technology P1	Explains the difference between the various types of implementation - on premise v SaaS, open source v enterprise, bespoke v off-the-shelf.	
	Distinction 6	Continuous Learning & Development D1	Gives examples of how their CPD has had a positive impact on theirs and their team's work	
	Distinction 7	Continuous Learning & Development D2	Explains how this has helped them perform their role better and make better technology choices.	
Professional Discussion Outcome				Distinction

Key: Did not meet criteria Criteria has been met Not Assessed

Feedback for Assessment Method 1

Feedback:

KSB Code Quality P1 was first met in the project. You described writing versioned and merge-friendly code, with relevant examples of adhering to Source Control principles.

KSB Code Quality P2 was first met in the project. You sufficiently evidenced an iterative approach to secure coding practices, with relevant examples of vulnerability mitigation and runtime dependency management.

KSB Code Quality P3 was first met in the project. You evidenced writing code with unit tests and provided relevant examples of using test doubles and mocking strategies.

KSB Code Quality P4 was first met in the presentation. You discussed troubleshooting methods and provided a relevant example of resolving a code quality issue.

KSB User needs P1 was first met in the project. You described writing user stories, with relevant examples of stakeholder engagement and adherence to acceptance tests.

KSB User needs P2 was first met in the project. You confidently discussed how your code meets user needs and provided relevant examples of adhering to acceptance criteria.

KSB User needs P3 was first met in the project. You described how your product reduces MTTR, with relevant examples of debugging and recovery strategies.

KSB User needs D1 was first met in the project. You described producing code that meets the 'should have' user needs, with relevant examples of addressing secondary acceptance criteria.

KSB CI-CD Pipeline P1 was first met in the presentation. You described building a CI-CD pipeline, with relevant examples of passing tests and automation.

KSB CI-CD Pipeline P2 was first met in the presentation. You described code commit processes, with relevant examples of artefact deployment to the end user.

KSB CI-CD Pipeline P3 was first met in the project. You described pipeline capability and code merging benefits, with relevant examples of CI/CD practices.

KSB Refreshing & Patching P1 was first met in the presentation. You described deploying immutable infrastructure and refreshing processes, with relevant examples of server recycling.

KSB Refreshing & Patching D1 was first met in the project. You described automation of refreshing and patching processes, with relevant examples of tools used.

KSB Operability P1 was first met in the project. You described monitoring and alerting practices, with relevant examples of tool management.

KSB Operability P2 was first met in the project. You provide a clear response detailing how alerting thresholds and visualisations were configured. The examples highlight your ability to identify failure scenarios and implement remedial actions, though more emphasis on continuous improvement strategies would strengthen your response.

KSB Operability D1 was first met in the project. You described custom metric introduction, with relevant examples of improvement areas identified.

KSB Operability D2 was first met in the project. You described interpreting and implementing improvement areas, with relevant examples of delivery strategies.

KSB Data Persistence P1 was first met in the project. You described using data persistence technology with relevant examples of functional and non-functional requirements.

KSB Data Persistence P2 was first met in the project. You described troubleshooting steps and provided relevant examples of issue resolution.

KSB Automation P1 was first met in the presentation. You described automating setup and deployment, with relevant examples of improving process efficiency. More depth on handling complex automation challenges would strengthen your response.

KSB Automation D1 was first met in the project. You described identifying and automating additional processes, with relevant examples of reduced effort.

KSB Data Security P1 was first met in the presentation. You described securing data in transit, with relevant examples of encryption methods used. More depth on handling complex security scenarios would strengthen your response.

KSB Data Security P2 was first met in the project. You described data threats and explained your decision on encrypting data at rest, with relevant examples of risk analysis.

Additional Information:

Feedback for Assessment Method 2

Feedback:

Organisational Culture P1, You provided a detailed explanation of how organisational culture both fosters creative freedom and imposes constraints. Your examples demonstrated a clear understanding of balancing cultural opportunities and limitations in a professional setting.

Organisational Culture P2, You provided a comprehensive explanation of how culture influences continuous improvement, both internally and externally. Your examples demonstrated strategic alignment and collaborative growth opportunities.

Organisational Culture D1, You described key cultural mindsets and their organisational impact, with relevant examples.

Organisational Culture D2, You described the links between risk and culture, with relevant examples of risk avoidance and acceptance.

Data Ethics P1, You described data protection legislation and its relevance to ethics and emerging technologies, with relevant examples.

Problem Solving P1, You described problem-solving techniques and modelling approaches, with relevant examples of team consensus.

Problem Solving D1, You described facilitating a post-mortem session, with relevant examples of lessons learned.

Problem Solving D1, You described facilitating a post-mortem session, with relevant examples of lessons learned.

The Profession in context P1, You described multi-disciplinary team roles, with relevant examples of their organisational fit.

The Profession in context P2, You described completing a task collaboratively, with relevant examples of flexibility and stakeholder involvement. More depth on addressing challenges or adapting approaches would enhance your response.

The Profession in context P3, You described communication methods, with relevant examples of stakeholder engagement. More depth on addressing challenging or diverse stakeholder groups would strengthen your response.

The Profession in context P4, You described acting inclusively and professionally, with relevant examples of positive stakeholder interactions.

Tooling & Technology P1, You provided a comprehensive explanation of the differences between various implementation types, illustrating their advantages and disadvantages. Your examples demonstrated strategic decision-making and alignment with organisational needs.

Tooling & Technology P2, You described using a tool for a task, with relevant examples of evaluating alternatives.

Tooling & Technology D1, You justified your tooling choice, with relevant examples of evaluating alternatives and considering their impact.

Continuous Learning & Development P1, You described your CPD activities, with relevant examples of keeping up with technology trends.

Continuous Learning & Development P2, You provided a comprehensive explanation of how you invest in others' learning, illustrating its impact on their development and your own. Your examples highlighted collaborative growth and enhanced skills.

Continuous Learning & Development D1, You described the impact of your CPD on your work and team outcomes, with relevant examples.

Continuous Learning & Development D2, You described the impact of CPD on your role and technology decisions, with relevant examples.

Peer Review P1, You described code review benefits and collaborative practices, with relevant examples.

Communicating & Knowledge Sharing P1, You described leading a demonstration, with relevant examples of audience engagement.
